Graduate Design Engineer Roles

Slipstream Engineering Design is growing and we are looking for people with brains, creativity and ambition. We now have openings for brilliant individuals with a passion for RF and Electronic design.

Working at the forefront of RF technology, we translate complex wireless challenges into manufacturable products that disrupt, lead and grow markets for our customers. As a design consultancy we work on a wide range of different projects for many different customers, from WiFi routers operating in rural Africa to complex RF sub-system modules for modern Radar systems.

The variety of projects we tackle will fire your imagination and kick start your career. As a graduate design engineer, we'll provide the support you need, but you'll also be trusted with real responsibility. We'll expect you to hit the ground running and make a difference straight away. In return you'll be joining a young, dynamic and encouraging team.

With technical excellence at its heart, Slipstream Design is a place where people are valued and success is shared.

If you have a passion for RF and Electronic design, please get in touch by sending a covering letter and CV to: info@slipstream-design.co.uk
