Project Support Roles

Slipstream Engineering Design is growing and we are looking for people with brains, creativity and ambition. We now have openings for brilliant Project Support Administrators with a passion for problem solving.

Working at the forefront of RF technology, Slipstream Engineering Design translate complex wireless challenges into manufacturable products that disrupt, lead and grow markets for our customers. As a design consultancy we work on a wide range of different projects for many different customers, from WiFi routers operating in rural Africa to complex RF sub-system modules for modern Radar systems.

The variety of projects we tackle will fire your imagination and offer your career its next challenge. As a Project Support Administrator, you'll have a keen eye for detail, love being organised and ideally will have experience working in a support/admin role for a busy, growing organisation. We'll expect you to hit the ground running and make a difference straight away. In return you'll be joining a young, dynamic and encouraging team where you'll be allowed to realise your potential.

With technical excellence at its heart, Slipstream Design is a place where people are valued and success is shared.

If you feel you've got what it takes to fulfil this exciting role and have the drive to grow with the business, please get in touch by sending a covering letter and CV to: info@slipstream-design.co.uk
